As indicated in diamond 58, the software checks for the receipt of the associated connection information. When the associated connection information is received, the content description may be linked to the connection information using the identifiers as indicated in Figure 3 and in block 60 of Figure 5. In one embodiment of the present invention, a connection may then be made through the connection information to the source as indicated in block 62 of FIG. 5. As a result, the associated content may be obtained as indicated in block 64.
